# Übung 1

a) Sortiere folgenden Zahlenfolge mit dem Insertionsort:

**5 2 4 6 1 3**

b) Erkläre den Insertionsort in deinen eigenen Worten.

c) Analysiere die Komplexität (Laufzeit) des Insertionsort.

d) Zeichne ein Struktogramm zum Insertionsort.

e) Erstelle ein Programm namens **Sortierverfahren** und implementiere folgende Funktion:

```
int[] insertionSort(int[] unsorted)
```

# Übung 1

5 2 4 6 1 3

5 2 4 6 1 3

2 5 4 6 1 3

2 4 5 6 1 3

2 4 5 6 1 3

1 2 4 5 6 3

1 2 3 4 5 6

```
Sortierverfahren.java

public class Sortierverfahren {
    public static void main(String[] args) {
        int[] unsorted = {5, 2, 4, 6, 1, 3};
        int[] sorted = insertionSort(unsorted);
        for (int i : unsorted) System.out.print(i + ", ");
        for (int i : sorted) System.out.print(i + ", ");
    }

    public static int[] insertionSort(int[] list) {
        int tmp;
        for (int i = 1; i < list.length; i++) {
            tmp = list[i];
            int j = i;
            while (j > 0 && list[j-1] > tmp) {
                list[j] = list[j-1];
                j--;
            }
            list[j] = tmp;
        }
        return list;
    }
}
```

Der Algorithmus hat 2 verschachtelte Schleifen mit je Länge (fast) n  
=>  $O(n^2)$

Bubblesort

# Wochenübung

- a) Recherchiere den Sortieralgorithmus **Mergesort**.
- b) Sortiere nach seinem Schema die Zahlenfolge:

**5 2 4 6 1 3**

- c) Vergleiche ihn mit den bisherigen Sortverfahren hinsichtlich der Komplexität (Laufzeit).
